PERSONAL PROJECTS

Aashan -Mentorship Web Application
 (03/2021 - Present)
- A Full Stack web application that helps the mentee communicate with the mentor through video conferencing. Today's generation needs great mentors and guides because we have a creative society building up and mentorship is quite important for it.

Face Recognition App using React
- A face recognition app that recognize and identifies facial regions in an input image. This project uses React as front end, NodeJS and ExpressJS for server creation at backend and PostgresSQL as the database.

RoboFriends using React
- A simple react.js web application created using react.js and robohash API.The project is implemented using both class component and functional component.States are maintained using Redux

COLLEGE PROJECTS

Third Year Project
Vehicle Tracking System

An application with real time GPS location tracker which tracks and gathers distance to each station along its route and updates its live location.

Fourth Year Project
Public Transport Smart Payment System

A smart electronic device which helps in enabling online payment in public transport sector employing QR code using a smartphone application. This would be an effective system towards a cashless Digital India.
